

ROTOPLAT 506 Door Wrapper

The Rotoplat 506 Door Wrapper is equipped with a larger diameter turntable and taller mast than the standard 506 model, allowing doors and windows of the following dimensions to be wrapped:

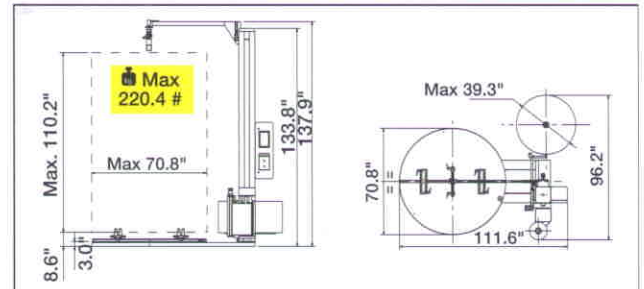

Thickness: 1.5" up to 14"

Width: 30" up to 70"

Height: 80" to 110"

Adjustable brackets are provided on the turntable to manually adjust to different door dimensions.

Machine is equipped with a foot pedal to operate the top platen while the operator is holding the door in place. The foam or bubble wrap material is inserted with the stretch film to complete protection.

ROTOPLAT 506 With Scale

Rotoplat 506 With Scale

The Rotoplat 506 with scale is a system that allows the operator to weigh the load. It consists of four integrated load cells mounted under the machine base.

The display mounted on the control panel is used to monitor the operation. Machine has standard communication port for printer connection.

ROTOPLAT 506 Automatic

Rotoplat 506 Automatic

The Rotoplat 506 Automatic machine model is a fully automated system.

Machine is equipped with an automatic clamp tail, cut and wipe down system for film treatment.

The operator simply places the load on the turntable, removes the forks and pulls on the lanyard to start the wrapping process. At the end of the cycle, the film will be automatically clamped, cut and wiped down against the load.

ROTOPLAT 506 Freezer

The Rotoplat 506 Freezer is equipped with the FRD carriage.

Designed to operate at temperatures reaching -22°F , this machine can be installed in freezer and applications such as ice cream, frozen food processing and many more.

The machine operates with the same features as the conventional 506 models with the additional features:

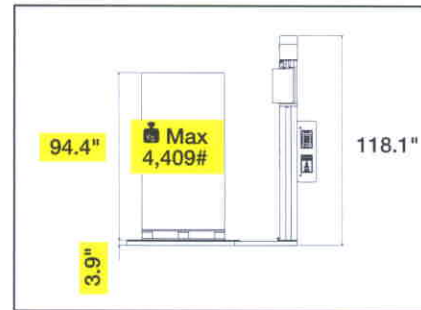

- Corrosion-proof treatment with Epoxy-vinyl powder coating paint
- Stainless steel sprocket, chains, transmission shaft, bolts and nuts
- Electrical Cabinet with the NEMA 4 protection
- Thermal regulation of temperature and special wiring

Technical specifications may vary without prior notice.

Rotoplat 506 INOX

The Rotoplat 506 INOX is a system made entirely of stainless steel to be used in very demanding environments. This model is wash down, and can be sprayed with water to be cleaned without risk of damage to vital components.

Rotoplat 506 TP

The Rotoplat 506 TP system eliminates the need of ramps to bring the pallet to the turntable. The table is designed with an access port for the pallet jack to enter.

Model is equipped with a safety photoeye preventing the start operation should a pallet jack be engaged in the turntable. This feature makes this model ideal for postal pallets.
